

Natej Information Technology Consulting L.L.C

“

Thinking back to when I first came up with the idea to establish Natejssoft, I do not think I can recall ever thinking it would become the success it is today. After years of tenacious hard work and fair set of challenges; it is so very gratifying to know that Natejssoft has become one of Jordan's premier software solutions providers, and that our dreams of expanding onto the regional scale have already come to bear. Facing a nascent, yet fiercely competitive industry at the time, we managed to crave the successes we have garnered so far.

Mission

Natejssoft mission is to develop and provide the most advanced, integrated software solutions and services to its clients in the most easily implemented way. Working with a range of ERPs, Natejssoft software is designed to coordinate its client's a complete set of resources, information and activities within one holistic system, contributing substantially to their productivity, efficiency and profitability.

Currently, Natejssoft provides its clients with several reliable desktop and web-based solutions, with full hardware and networking compatibility. We also pride ourselves on the malleability of our expertise, allowing us to customize our products to client's exact needs and requirements. Expanding our product portfolio, including developing software solutions tailored to a wide variety of sectors, is an integral part of our vision for the future.

Vision

The mainstay of Natejssoft overall vision lays in our ongoing commitment to become one of Jordan's leading providers in advanced software solutions within the Information Technology Sector. Through its unwavering determination and expertise, Natejssoft hopes to be a leading supporter and promoter of the Kingdom's IT sector, in line with His Majesty King Abdullah II's directives and vision for the sector's overall progression.

As a company headquartered in Jordan, Natejssoft is the pleased recipients of some of the region's top IT graduates. Our pool of talented, educated and creative minds means Natejssoft has a comparative advantage to present to the surrounding regional market. Indeed, Natejssoft is well on its way to achieving its ambition; to establish its presence in every Arab Country throughout the Middle East and North Africa (MENA) region.

Our Services

ERP System

Natejssoft Software technology consists of unified systems and solutions for advanced enterprise resource planning (ERPs), and a wide variety of solutions that suit various business sectors, which can be used as separate models or as integrated information systems that serve the whole institution, and provide adequate support for the business activities execution. Our software solutions ensure easily usage of entering, updating, storing, sharing, retrieving data and resources and activities by clients. Our confidence came from our experts' ability to give the best solutions.

Tracking System

If you are a car owner, you are concerned about the safety of your vehicle! If you manage a fleet of vehicles, then your concerns go beyond the safety of vehicles to the safety of personal and the customer satisfaction; "I want to know where my car is!" or "I want to know the status of the semi" does this sound like you? If so, Natejssoft has the answer! With Natejssoft GIS management suite, you can easily and from the convenience of your desktop monitor your vehicle, not just which, you can even start or stop the vehicle remotely!

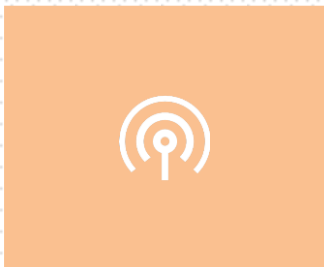

Gas Station

The Gas Stations Management system connects all the gas station procedures from selling through the fuel pumps or providing tanks with fuel or delivering gas service, therefore, the system provides comprehensive management of sales and inventory through direct connection with the devices available inside the station. Natejssoft provides you all of equipment and supplies gas stations of fuel Dispensers in all shapes and sizes, speeds and specifications. It also provides you with a automatic tank gauging system, tanks of fuel to the gas station and provide you with automatic payment machines.

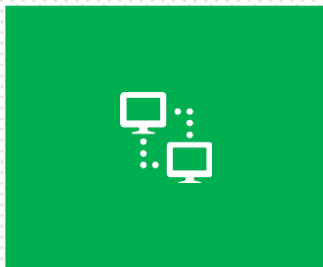

Mobility Solutions and Applications

Our solutions provide all the power you need to manage your mobile field service, sales and delivery teams. Here you can set the rules and parameters for your entire operation, including customer profiles, asset profiles, telesales calling schedules, warehouse and stock control, customer specific pricing, promotions, merchandising questionnaires, suggested customer stock levels, van sale, etc.

RFID Solutions

When you hear the term RFID used today it most commonly refers to the burgeoning business application for managing and tracking supply chains, especially in the materials, manufacturing, and retail industries. The supply chain business objective is to use RFID technology to not only take the just-in-time inventory concept to its next performance level but to support additional information functions ... from streamlining the product recall process and reducing theft and fraud, to further improving the type and quantity of product marketing information.

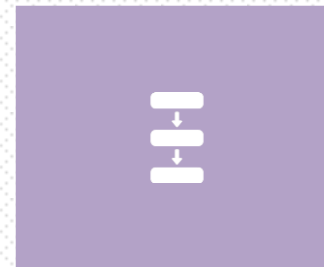

Hardware and Networking

There are a variety of hardware components and networking solutions that allow users to make the most out of their personal and business computers. This hardware allows users to maximize their efficiency and make the most out of their resources. There are several types of computer, network, storage, laptops, servers, networks solutions and backup hardware.

Cloud Solutions

Cloud computing (“the cloud”) is one of the leading technology topics in the world. Cloud computing, sometimes called on-demand computing, uses the Internet or Intranet to provide shared computing resources and storage of Database, records, users transactions or documents. Natejssoft fully integrated Cloud ERP Solutions capture and create accurate, consistent and timely data for a number of sectors, including Finance, Human Resources, Project Management etc. And as a web-based solution, our products can be accessed via the Internet, your Intranet or both in a totally secure environment. What’s more, users can access the system from anywhere, at any time, using any web-enabled device.

Geophysical Solutions

Geophysical surveying techniques provide a toolbox of rapid, discrete and cost effective methods for the location and identification of subsurface features. Natejssoft solutions provide consultancy, survey design and site investigation services. We routinely apply state of the art geophysical instrumentation to the identification of subsurface features associated with man-made and natural phenomena. Our senior staffs have international research profiles through their work in geophysical data collection and interpretation, with work ongoing into new equipment and data processing software.

ERP System

Natejssoft Software technology consists of unified systems and solutions for advanced enterprise resource planning (ERPs), and a wide variety of solutions that suit various business sectors, which can be used as separate models or as integrated information systems that serve the whole institution, and provide adequate support for the business activities execution. Our software solutions ensure easily usage of entering, updating, storing, sharing, retrieving data and resources and activities by clients. Our confidence came from our experts' ability to give the best solutions.

Natej ERP (The solution for every user)

Natejssoft Software technology consists of unified systems and solutions for advanced enterprise resource planning (ERPs), and a wide variety of solutions that suit various business sectors, which can be used as separate models or as integrated information systems that serve the whole institution, and provide sufficient support for the business activities execution. Our software solutions ensure easily usage of entering, updating, storing, sharing, retrieving data and resources and activities by clients.

Our confidence came from our experts' ability to give the best solutions, so we named on our system (Natejssoft).

Our services cover a wide range of software solutions that can be applied to various business sectors, where the company seeks to provide flexible solutions that can be allocated, designed and adapted to suit our customers' different needs and requirements. To ensure the integration of these services, the company provides many special solutions many companies do not have. Business sectors and technology have witnessed clear developments in the ranges and boundaries that have managed to overcome, so that it exceeded the limits of the traditional offices to move into wider space.

From there, Natejssoft proceeded to develop software systems that upgraded their level to convoy with the modern use of technology and applications based on the Internet.

The company is specialized with wide expertise in this field; it contributed to the development and provision of software solutions for applications that depend on the Internet.

Natejssoft succeeded in linking the Short Message Services (SMS) and wireless communication technologies (GPS, GPRS, RFID, Smart Solutions, Mobility Solutions) with the central databases. In addition, Natejssoft succeeded in developing communication solutions for laptop (PDAs) and linked it directly to the system and to the specific databases.

Business Intelligence Dashboards

Natejsot Software providing A business intelligence dashboard and it is a data visualization tool that displays the current status of metrics and key performance indicators (KPIs) for an enterprise. Dashboards consolidate and arrange numbers, metrics and sometimes performance scorecards on a single screen. They may be tailored for a specific role and display metrics targeted for a single point of view or department. The essential features of a BI dashboard product include a customizable interface and the ability to pull real-time data from multiple sources.

What is The Dashboard

The business intelligence dashboard is often confused with the performance scorecard. The main difference between the two, traditionally, is that a business intelligence dashboard, like the dashboard of a car, indicates the status at a specific point in time. A scorecard, on the other hand, displays progress over time towards specific goals. Dashboard and scorecard designs are increasingly converging. For example, some commercial dashboard products also include the ability to track progress towards a goal. A product combining elements of both dashboards and scorecards is sometimes referred to as a scoreboard.

Our Dashboards Futures

- Fully customizable visualizations to create personal and professional dashboard views.
- Easy and smart.
- Data filters (dates, categories, etc.).
- Any where any time (live data).
- Automatic selection of chart types Bar, Pie, Line, etc.
- Automatic selection of data columns.
- Hide/unhide data categories.
- Customized dashboards depend of any business needs.

Tracking System

Natejssoft is dedicated to help you monitor any mobile vehicle through a sophisticated, second generation GPS tracking functionality; a small – non intrusive – hardware is installed on the vehicle and that's it! Afterwards, the management suite shall:

- Allow you to monitor your vehicles movement through direct Google™ map
- Allow you to connect and monitor to vehicle cabin voices/sounds
- Allow you to view critical information regarding your vehicle
- Manage up to 200 vehicles per a single receiver unit
- Start the ignition, monitor gas status, monitor speed, turn off the engine in a click of a button
- Setup alarms automatically and trigger SMS messages upon the occurrence of any of the pre-defined alarm conditions

Who can benefit it

- Anyone who desires to manage his/her car and make sure of its safety at all times (even in case of theft)
- Manage a transportation service (Taxi service, Bus service)
- Manage service transportation (Trailer delivery service, Trucking, International transportation)
- Car rental offices
- Government sectors(s)

Main Feathers

Remotely manage your car Meaning that you could manage your vehicle and query information regarding the running operation and data of a managed vehicle such as:

- Turn on the ignition
- Lock the doors
- Vehicle Location through GPS
- Flexible Method of communication
- Safe Zone alarm / Geographical Fence
- Parking Report
- Power Settings
- SOS
- Turn off the car
- Unlock the doors (in case of forgotten keys)
- Listen and Talk
- Manage Alarms
- Anti Theft alarm
- Over speed
- Tow Alarm

How it works

By installing a small-sized hardware component to the vehicle and connecting it to the proper channels, a receiver is placed at the dispatcher(s) site(s) – manage up to 200 vehicles on one receiver – and a small amount of configuration for the system to properly work.

Mobility Solutions and Applications

WE ALWAYS CREATE AWESOMENESS

Our solutions provide all the power you need to manage your mobile field service, sales and delivery teams. Here you can set the rules and parameters for your entire operation, including customer profiles, asset profiles, telesales calling schedules, warehouse and stock control, customer specific pricing, promotions, merchandising questionnaires, suggested customer stock levels, van sale, etc.

Gas Stations Solutions

The Gas Stations Management system connects all the gas station procedures from selling through the fuel pumps or providing tanks with fuel or delivering gas service, therefore, the system provides comprehensive management of sales and inventory through direct connection with the devices available inside the station. Natejssoft provides you all of equipment and supplies gas stations of fuel Dispensers in all shapes and sizes, speeds and specifications. It also provides you with a automatic tank gauging system, tanks of fuel to the gas station and provide you with automatic payment machines.

RFID Solutions

When you hear the term RFID used today it most commonly refers to the burgeoning business application for managing and tracking supply chains, especially in the materials, manufacturing, and retail industries. The supply chain business objective is to use RFID technology to not only take the just-in-time inventory concept to its next performance level but to support additional information functions .

Cloud Solutions

Cloud computing (“the cloud”) is one of the leading technology topics in the world. Cloud computing, sometimes called on-demand computing, uses the Internet or Intranet to provide shared computing resources and storage of Database, records, users transactions or documents.

Natejsoft fully integrated Cloud ERP Solutions capture and create accurate, consistent and timely data for a number of sectors, including Finance, Human Resources, Project Management etc. And as a web-based solution, our products can be accessed via the Internet, your Intranet or both in a totally secure environment. What’s more, users can access the system from anywhere, at any time, using any web-enabled device.

Make sure your data travels with you as well

Avoids upfront costs for all computing infrastructure such as hardware and data servers

Reduces IT support services because IT is in the cloud

Eliminates paying upfront for application software licenses

Shrinks the cost of maintaining and supporting those applications since the cloud vendor handles the updates and upgrades

Paying only for the computing resources needed

A fixed monthly rate so companies can use their cash on other business initiatives

Taking advantage of Cloud ERP applications faster since installation of hardware and software on servers or user devices is not required

The ability to adjust the amount of cloud service as a company’s computing or storage needs fluctuate

Enjoying the confidence that the data has been backed up and there is a disaster recovery plan

Avoiding attacks on the company’s server because the data is not stored locally, but in the cloud

Accessing the system from anywhere makes it easy for a company to expand geographically since the Internet is everywhere and there is no need to implement hardware and software at remote locations

Geophysical Solutions

Geophysical surveying techniques provide a toolbox of rapid, discrete and cost effective methods for the location and identification of subsurface features. Natejsoft solutions provide consultancy, survey design and site investigation services. We routinely apply state of the art geophysical instrumentation to the identification of subsurface features associated with man-made and natural phenomena. Our senior staffs have international research profiles through their work in geophysical data collection and interpretation, with work ongoing into new equipment and data processing software.

- Ground penetrating radar.
- Electromagnetic (Em) ground conductivity.
- Electrical resistivity imaging.
- Magnetics surveying.
- Seismic refraction.

Others Customized Solution

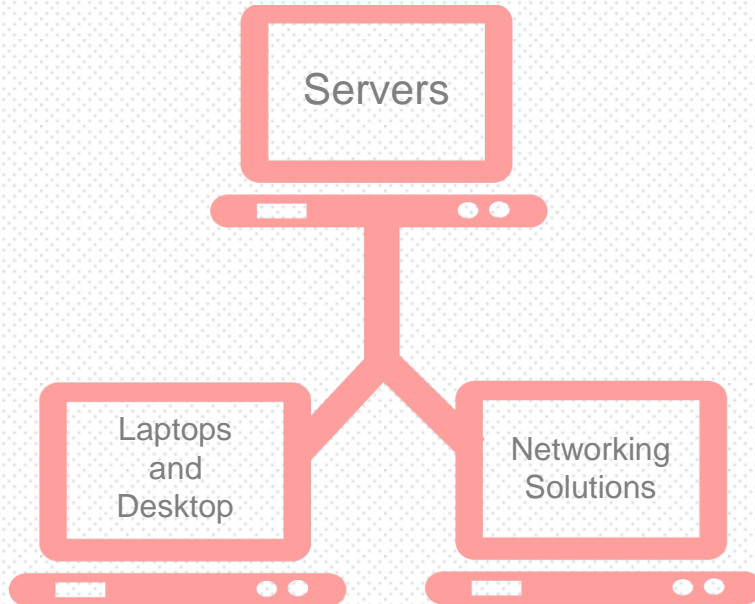

There are also many systems that serve several effective sectors by full integration with other financial and administrative systems such as:

-  Customized systems and solutions as required.
-  Cars Rental System
-  Taxi Rental System.
-  Property Management System
-  Supply Management System.
-  Subscriptions System in centers and clubs of all kinds
-  Task Management System.
-  Social Fund Management System.

Hardware and Networking

Cloud and E-solutions

Natejssoft- UAE provides advanced technical E-solutions across a wide range of disciplines. All our e-solutions are designed to integrate into the existing infrastructure, independent of the incumbent manufacturer. Also, we can provide (hosting, web design, E commerce solutions, E-business applications and any custom E-solutions in addition to cloud storage service).

E-Software Solutions is not just about finding solutions, its all about going an extra mile to transform your intellectual vision into a reality. Creating the right solution isn't our only goal, but assisting you in its successful implementation is our major focus. We have variety of techniques that help us determine what your users need. e-Software Solutions leaves no stone unturned to meet your requirements as an organization - making it easy.

Our Implementation Methodology

Mapping

In this phase we will understand the way your organization work, our consultants will perform a site visits to your different locations and meet with your key users to understand your business requirements and your business processes, this will help us to understand your business environment better and put the road map of how can we help you to improve your business according to the best practice and through using our ERP system.

The result of this phase is a document that describes the present situation; this document is called "Mapping Document".

Gap Analysis

In this phase, our consultants will create the gap analysis document; this document will describe the gaps between your present system and your new ERP system, by giving approval on this document you will give us the green light to move to the next phase.

Customization

As a result from the Gap analysis phase we may need to make customizations, together Natejssoft project manager and client project manager are the only persons who are authorized to agree on doing customizations. Natejssoft will create a document containing prototypes with full business details, this document is called "To Be Document", by taking approval on this document from the client project manager the development of the design will begin, immediately after the client approval on this document Natejssoft project manager will deliver a deadline to complete the customizations.

After completing and delivering the required customization successfully, approval from the client project manager should be obtained to move to the next phase.

Process Design

During the build, the design is set into action. All implementation decisions and all processes that have been developed and verified during design are adapted to physically construct the system.

Also we will use your sample data which you will provide it to us according to our template to complete this phase.

This phase will be only inside our offices, you can see the result of this phase only in the next phase.

Training

In this phase, Natejssoft project manager will agree with the client project manager on the detailed training schedule, never to mention that the training schedule dates will be already defined in the previously delivered project plan.

By obtaining the approval of client project manager on the training schedule, Natejssoft will start the training phase, after completing this phase, client project manager will give Natejssoft project manager his approval on the training completion.

Through training sessions, the users will learn how can they create all of the necessary data for going life, example : opening balances, Natejssoft project manager will request a deadline from client project

Pilot Session

This phase is a preparation to the go life, all users will set in one room and start making transactions on a test environment to make sure that everybody understands his role and to see the flow of data, managers will give orders to their staff and staff will execute this orders on the system.

Go Live

Natejssoft consultants will be in client site only to give support and to handle any unexpected problems, this phase is completely client project manager and users responsibility.
